

Public Flash Alert

Subject	po1s0n1vy APT Group
Date	26SEP16

DISCLAIMER: This advisory is provided “as is” for informational purposes only. The Gotham city police department (GCPD) does not provide any warranties of any kind regarding any information contained within. The GCPD does not endorse any commercial product or service, referenced in this advisory or otherwise.

GCPD is providing the following information with **HIGH** confidence:

The APT group known as “Poison Ivy” (spelled in various iterations), a pro-environmental hacker group that emerged recently during anti-government protests, has been compromising high profile Gotham websites to spread pro-environmental propaganda. Poison Ivy’s primary capabilities include ransomware, web defacements, domain typo squatting, and the hijacking of social media accounts to spread false information and propaganda. Over the past several months, the group has been highly effective in compromising high-profile media outlets and individual citizens’ devices. This recent activity has been executed through unknown efforts. The GCPD assesses that the possibility of downtown rejuvenation in Gotham may lead to further escalation of computer network attacks by pro-environmental or other aligned cyber actors.

TECHNICAL DETAILS

The GCPD is providing the following information with **HIGH** confidence:

“Poison Ivy” uses custom tools that should be immediately flagged if detected and reported to Gotham Internet Monitoring Pool, given the highest priority for enhanced mitigation. The aforementioned actors have used identified domains names and IP addresses as both source and/or destination IPs. The GCPD is distributing the known TTPS group to enable network defense activities and reduce the risk of similar attacks in the future. The GCPD recommends that your organization help victims identify and remove the malicious code.
